

MYBREQURIMENT FOR SOFTWARE ARE

1. I need table which need to showcase cash bought from and how much
2. AND how much i given to the seller
3. How much gold i bought
4. Gold Bar market rate which i need to enter manually
5. Gold booked rate
6. I Enter How much grams by touch percentage . Then it need to convert to purity
7. For example i bought 5 grams the touch percentage was 80.75 the pure weight was 4.0375
8. For calculation $5 \times 0.8075 = 4.0375$
9. And the pure sells for how much amount
10. And who are the bending amount

Main Dashboard Structure

1. Purchase Entry Table

Every row = one gold purchase.

Date	Seller Name	Cash Bought From	Cash Given	Gross Weight	Touch %	Pure Weight	Market Rate	Booked Rate	Pure Value	Pending Amount
------	-------------	------------------	------------	--------------	---------	-------------	-------------	-------------	------------	----------------

How the Calculation Works

Example

You bought:

- 5 grams
- Touch = 80.75%

Software converts automatically:

$$5 \times 0.8075 = 4.03755 \quad | \quad \text{times } 0.8075 = 4.03755 \times 0.8075 = 4.0375$$

So:

- Gross Weight = 5g
- Purity = 80.75%
- Pure Gold Weight = 4.0375g

Then:

If market rate = ₹9,500 per gram

$$4.0375 \times 9500 = 38356.25 \quad 4.0375 \times 9500 = 38356.25$$

Pure gold value:

$$= ₹38,356.25$$

Pending / Bending Amount Logic

Software calculates:

Formula

Pending Amount =

(Pure Gold Value) – (Cash Already Given)

Example:

- Pure Value = ₹38,356
- Cash Given = ₹30,000

Balance pending:

$$38356.25 - 30000 = 8356.25 \quad 38356.25 - 30000 = 8356.25$$

Pending Amount = ₹8,356.25

This tells:

- how much you still owe seller

- OR if seller owes you
